

Barista

Menu-bar Widgets Suite in one app.

[PRESS FACT SHEET](#) · [Mac App Store](#)

Stop juggling ten menu bar apps.

Barista replaces the dozen single-purpose status bar utilities most Mac users run today. One native, sandboxed app puts 35+ widgets (Email, Calendar, Reminders, Clipboard, Weather, Stocks, News and more) in your menu bar, each with its own feature-rich popover.

Why Barista

- **35+ widgets, one install.** Enable what you want; manage everything from one dashboard running under one process. No need to juggle a dozen different apps.
- **Feature-Rich Suite.** Email, Calendar, Reminders, Clipboard manager, Weather, RSS, system widgets, games and everything in between. Do all your repetitive tasks and more in one click without messing with your open windows.
- **The optional Barista Bar.** Out of menu-bar room, or behind the notch? A dedicated bar drops below the menu bar, fully laid out. You can pin it and move it wherever suits your workflow.
- **Private by design.** Nothing is transmitted off device. Mail and feeds go straight from your Mac to the provider. Clipboard history is encrypted at rest, password managers are filtered, and there is a per-app blocklist.
- **Pay once.** No subscriptions, no ads, no nag screens.

Marquee widgets

- **Email Client.** Direct IMAP and SMTP (Gmail, iCloud, Yahoo, AOL, custom) with multiple accounts and threaded discussions. No handoff to another app needed.
- **Clipboard Manager.** History, different types(text, files, images, links). You can pin, name, and search items. Paste as simple text. Manage blocked apps from copying. Glance new emails, reply, compose, right from the bar.
- **Calendar and Reminders.** View at a glance your day and month, create events and reminders, manage your life right from the bar.
- **News:** an RSS and Atom reader; news ticker with headlines rolling in the bar; add to Safari Reading List or open directly in browser.
- **Weather and Crypto/Stocks:** live conditions for any place; tickers with sparkline charts.
